

Ballet Barre Wall Mount

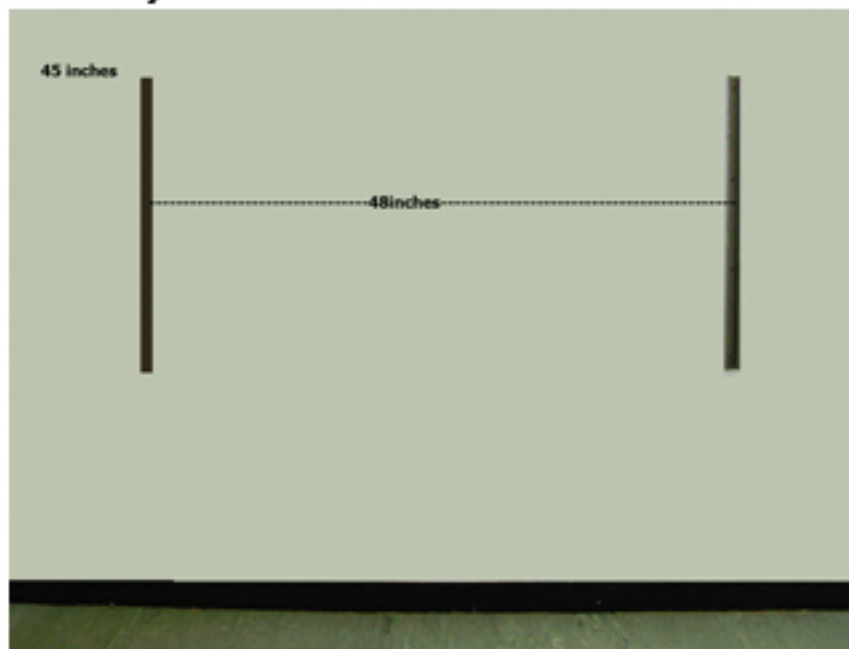

1) Place one thumb screw in each hole of the ballet barre arm bracket, screw 3 to 4 turns, or until thread comes through back side of bracket.

2) Slide one bracket approx 12 inches onto each side of the ballet barre tighten screws slightly and put assembly to the side.

3) Mount Wall Channels (with appropriate screws) with top of channel is 45 inches from floor, and 12 inches in from the ends of each barre. Be sure that channel is lined up over a wall stud(concrete and stone type walls can be mounted in any location). Channels should be 48 inches on center apart from each other

4) Slide Ballet barre and bracket assembly into wall channels (screws on arms may need to be loosened in order to fit properly) Position barre at desired height and tighten all screws.
